ABSTRACT

PROBLEM TO BE SOLVED: To automatically sum up sales conditions per hour, day, week, and month of each kind of machine without requiring workers and accurately grasp the operation conditions of each kind of machine and obtain information to examine the most effective application way.

SOLUTION: This wireless coin-counting system is provided with a wireless coin-counting unit 20 counting correct coin signals from coin selectors 21 of each kind of machine and transmitting the number of accumulated coins or call signals for operators or the like through radio, a center unit 30 summing up, indicating, and printing the information data transmitted from the wireless coin-counting unit 20 and calling operators, and a wireless unit 40 repeating the information exchange between the wireless coin-counting unit 20 and the center unit 30 through radio signals.

Abstract (Basic): JP 11114209 A

NOVELTY - A transmitter transmits memory information to a center unit (30), when inquired by hand-held type totaling unit. An official incharge ringing tone is transmitted to the center unit via a wireless unit (40) and to an official incharge side via the center unit. DETAILED DESCRIPTION - A controller controls the coin acceptance or prohibition by a selector. A counter counts coin number supplied to the various machines and its sum is stored.

USE - Used for confirming quantity of coin fed into various game machines currently installed by amusement facilities.

ADVANTAGE - Since the sales situation of various machine can be done automatically, operation situation of each machine is accurately understood. DESCRIPTION OF DRAWING(S) - The figure shows the block diagram of wireless coin count system. (30) Center unit; (40) Wireless unit.
